

**WEBSense**  
**WEB SECURITY AND**  
**HOSTED EMAIL SECURITY**  
 FOR MEDIUM & LARGE BUSINESSES

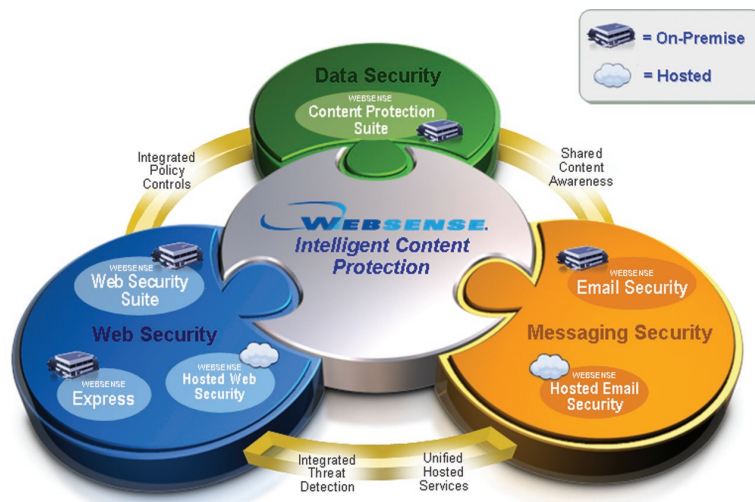

With today's evolving threat landscape, a solution that secures your Web and email infrastructure is essential. Businesses are getting smarter about where they are investing their IT resources and budget.

Websense® Web Security and Websense Hosted Email Security solutions provide comprehensive protection for all types of Internet threats. Websense Hosted Security examines millions of emails and Web requests every day. Because of this wide-reaching visibility, Websense detects malware patterns as soon as they emerge, protecting customers far in advance of traditional antivirus technology. A combined on-premise Web security and hosted email security solution delivers broad visibility, control, and protection to safeguard your organization against a full spectrum of threats.

With Websense Web Security and Websense Hosted Email security, you can:

- Block Web and email threats at their source, improving network efficiency and saving business costs
- Reduce email bandwidth and storage requirements, and block spam and viruses before they reach your network
- Establish detailed and flexible Internet usage policies, including Allow, Block, Continue, Quota, Block by Bandwidth, Block by File Type; and set policy across multiple protocols, including FTP, streaming media, IM, and P2P
- Provide layered compliance for regulations such as CIPA, HIPAA, and Sarbanes-Oxley
- Ensure scalability to meet your growing business needs and provide predictable capacity planning costs

*Websense Hosted Email Security provides protection at the Internet level, eliminating threats before they reach your network*

## How Websense Web Security and Hosted Email Security Work Together

Web security is most effective when it is integrated tightly within the organization—providing granular usage policies and security based on your own finely-tuned requirements. On-premise deployments of email security can be expensive; businesses have to pay for bandwidth, hardware (built out for redundancy, failover, and multiple email gateways), as well as electricity and storage costs. Ninety to ninety-five percent of all email today is spam, meaning that nearly all of these on-premise costs go toward handling and managing junk email.

By combining Websense Web Security and Websense Hosted Email Security, Websense delivers:

- **Best security.** Hosted Email Security uses the Websense ThreatSeeker™ technology and is integrated with the Websense Hosted Security global delivery network to provide zero-hour outbreak protection.
- **Reduced legal liability.** Legal liability can be greatly reduced through enforceable and granular Web usage policies. Websense Hosted Email Security further enables corporate compliance by providing server-to-server as well as end-user encryption, and ensures that all messages on your network are legitimate, keeping in compliance with regulations such as Sarbanes-Oxley and HIPAA.
- **Improved user productivity.** Focused user productivity on the Web results in improved business costs. This benefit now extends to users' time managing their email inboxes as well. Controlling Web usage and reducing spam can lower your business costs.
- **Optimized network resources.** Websense Hosted Email Security layers perfectly with Websense Web Security to increase your network's efficiency by blocking threats at their source. For email

security, threats are blocked in the cloud, eliminating spam and viruses before they come near your network. By blocking threats at their point of origin, network efficiency and the costs of managing network security are greatly improved.

### Websense Web Security

Websense Web Security is the industry-leading Web filtering and Web security solution, protecting organizations from known and emerging Web-based threats. Based on the automated ThreatSeeker technology, Websense Web Security protects employees from the risks of accessing inappropriate and malicious content, including spyware, mobile code, phishing, botnets, and other threats. Unlike other solutions, Websense Web Security also blocks spyware and keylogger backchannel communications from reaching their host servers.

### Websense Hosted Email Security

Websense Hosted Email Security provides assured protection against messaging threats such as malware, spam, phishing, and inappropriate content. Websense Hosted Email Security reduces the total cost of ownership by eliminating the administrative overhead and associative costs of maintaining a product on-site. Websense Hosted Email Security provides messaging security in four modules: Hosted Antispam, Hosted Antivirus, Hosted Content Filter, and Hosted Encryption, which provides business-to-business as well as user-to-user encryption.

### The Websense Difference

Websense industry-leading threat protection combines multiple proprietary technologies and global expertise to provide the most comprehensive and meaningful threat databases in the industry. Only Websense provides protection this far-reaching and with this level of accuracy.

### Summary

Websense Email Security is an easy-to-use and cost-effective solution providing:

- Effective protection from spam, viruses, and blended attacks
- Out-of-the-box support for regulatory compliance
- Powerful and flexible policy controls

Websense ThreatSeeker technology provides proactive protection against email and Web-based threats, stopping attacks before they hit your network. By combining unrivaled security expertise with automated detection technology, ThreatSeeker technology provides the highest levels of accuracy with the lowest levels of false positives.
